DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-35, drawn to lightning detection system (apparatus), classified in class 324, subclass 72.
 - II. Claims 36-68, drawn to lightning detection method (process), classified in class 702, subclass 4.

Distinctness

2. Inventions II and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the method (process) as claimed can be practiced by plurality of apparatus as disclosed. For example, the apparatus of independent claim 23 requires a non-linear amplifier whereas the apparatus of independent claim 1 does not require a non-linear amplifier.

Why Restriction is Proper

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Election of Species

4. If applicant elects invention of group I a further election of species is required.

This application contains claims directed to the following patentably distinct species of the claimed group I invention:

Species A (Apparatus claims)

- A1. Claims 1-22, species pertaining to an apparatus requiring digital processor.
- A2. Claims 23-35, species pertaining to an apparatus requiring non-linear amplifier.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, there are no generic claims .

If applicant elects invention of group II a further election of species is required.

This application contains claims directed to the following patentably distinct species of the claimed group II invention:

Species B (Method claims)

- B1. Claims 36-57, species pertaining to a method requiring a digital detection signal representative of the derivative of electromagnetic field.
- B2. Claims 58-68, species pertaining to a method requiring amplifying an electrical detection signal so as to produce an amplitude compressed detection signal having reduced dynamic range.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, there are no generic claims.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

A telephone call was made to attorney on record on May 23, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

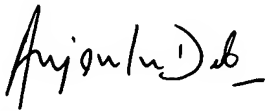

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
